

Amendments to the Specification

Please replace the paragraph beginning at page 7, line 22, which starts with “Fig. 1 is a” through page 8, line 9 with the following paragraph:

Fig. 1 is a generalized block diagram of an exemplary data transfer and synchronization system. In particular, the system includes network 10 that includes one or more storage servers 12, 14 and a management server 15. A plurality of client devices (e.g., home PC 16, office PC 18, personal information Palm® computing device 20, and web-enabled cellular telephone 22) are capable of coupling to network 10 and exchanging synchronization information in an off-line fashion via the storage servers 12 and 14, in accordance with the techniques described in U.S. Patent Application Serial No. 09/490,550, filed January 25, 2000 No. 6,694,336, issued on February 17, 2004, U.S. Patent Application Serial No. 09/491,675 and U.S. Patent Application Serial No. 09/491,694 both filed January 26, 2000, and U.S. Patent No. 6,671,757, issued on December 30, 2003, and all entitled “Data Transfer and Synchronization System,” incorporated herein by reference.

Please replace the paragraph beginning at page 13, line 23 through page 14, line 5 with the following paragraph:

In situations where there is a sequence of change logs, there may be numerous conflicting changes to the same item. When this happens the user is asked to decide which of the conflicting versions to keep. Prior to change log aggregation (i.e., with multiple change logs), each time an item, for which a conflict existed, was changed, the user was required to resolve ostensibly the same conflict. In an aggregated log, there would generally be only one entry for each item and thus, ~~thus~~ only one possible conflict to resolve.
